

VICTORIA TERAN

Full Stack developer & Architect

About me

Passionate developer and architect who ventured into technology in early 2022. With a background in architecture, I discovered my love for programming and have been learning ever since. Completing my architecture degree demonstrated my dedication, responsibility, and commitment, while also providing me with design skills that I've applied to web development. I have worked on several collaborative projects where, in addition to learning new technologies, I developed strong teamwork skills. Currently, I work as a freelance Frontend Developer, but I'm looking to join a team to consolidate and strengthen my skills in a professional environment. I am open to both solidifying existing technologies and learning new ones.
